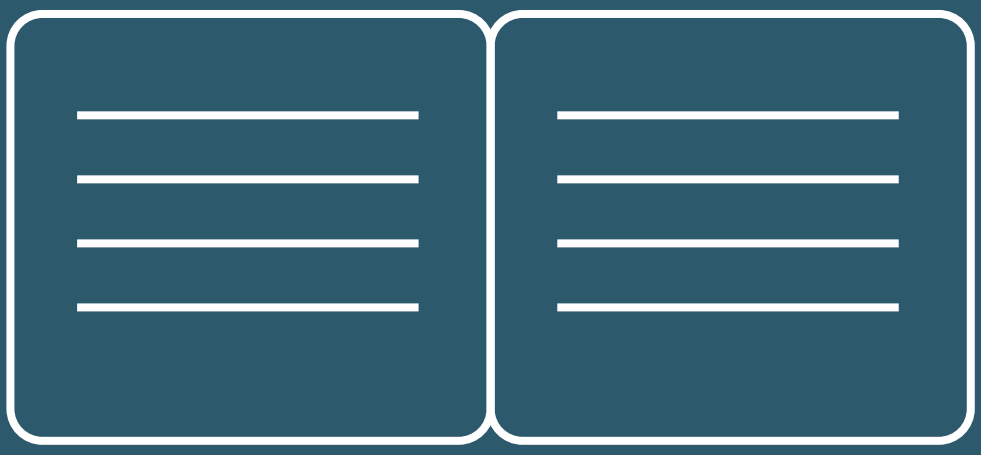
A four-lesson phone photography mini course



SanjAI Matta

Published by Sanjay Matta | English | Digital PDF

10 focused pages + editable companion | 22 October 2026

One useful result

A four-lesson phone photography mini course. Work through one lesson at a time, then use the three printable worksheets on a real, low-stakes situation.

Your route through this mini book

1. Set one honest objective

2. Move the setup, not the slider

3. Build a useful three-view set

4. Edit lightly and check the truth

Read the lesson, compare the worked example and complete the action. Pages 7-9 are writing sheets; page 10 helps you review the result. The editable Markdown companion contains the same prompts for reuse in a notes app.

Beginner mini course with four practical lessons and a final photo assignment. No certificate, income promise or specific app subscription is included.

Original educational content and vector artwork. Examples are fictional. Personal and household printing is permitted. Redistribution, resale and public uploading of the paid files are not permitted. © 2026 SanjAI Matta.

Set one honest objective

Choose a small non-reflective product for the first exercise. Your goal is a clear, truthful image, not an expensive studio look. Clean the phone lens gently with a suitable cloth and clear the background. Use your own product or something you have permission to photograph. Keep labels, quantities and included accessories accurate.

Worked example

A soap maker photographs one wrapped bar on plain card. Decorative flowers are omitted from the main listing image because they are not included in the purchase.

Try it now

Take a baseline photograph. Write the product, intended viewer and one detail the image must communicate.
